TYPE OF EXAMINATION REQUESTED:

Crime Gun Examination/Unfired Ammunition

Hair Examination

The following is a report of the Crime Laboratory giving the results of examinations conducted on specimens received from your office. This examination has been made with the understanding that the specimen is connected with an official investigation of a criminal matter and the laboratory report will be used for official purposes only, related to the investigation or a subsequent criminal prosecution. Authorization cannot be granted for the use of this report in connection with a civil proceeding.

**SPECIMENS:**

- Q-1 --- revolver, 6 shot, .357 Magnum chambered Sturm, Ruger & Co., Security Six model, serial number 152-80943 from a CPD gun envelope numbered 5774
- Q-2 --- two small lead fragments recovered from Melvin Olinger at autopsy H-28-94
- Q-3 --- two unfired Remington brand .357 Magnum cartridges having scalloped jacketed hollow point bullets from a white leather pouch submitted in a CPD property envelope numbered 5690
- Q-4 --- cut, black parka with a label "Outdoor Exchange L-42-44" removed from Melvin Olinger at autopsy
- Q-5 --- a pair of black slacks labeled "Palm Beach"
- Q-6 --- three tape lifts used to collect hairs from the trunk of a blue FORD "TAURUS" with Ohio license: NMN - 685
- Q-7 --- four tape lifts used to collect hairs from the passenger compartment of a blue FORD "TAURUS" with Ohio license: NMN - 685
- K-1 --- a known head hair sample from Melvin Olinger

**FINDINGS:** (The findings below are based upon standard firearms identification and examination procedures.)

- a) No malfunctions were encountered in the examination and test firing of the Q-1 revolver.
- b) Prior to test firing, the Q-1 revolver was examined for blood, hairs or fibers with negative results. One chamber, fired more recently than the rest, was noted and marked on the cylinder of Q-1.

FILE NO. 318-94-F-M

- c) The Q-2 lead fragments have a total weight of 0.6 grains and are devoid of usable rifling impressions.
- d) One of the two cartridges of Q-3 was disassembled and found to contain 15.6 grains of flattened ball propellant and a flat base 158 gr., scalloped, jacketed hollow point bullet.
- e) No holes, soot or propellant were seen in the right side of the Q-4 coat. An attached, black nylon hood was still within its zippered collar compartment.
- f) Bullets test fired from the Q-1 revolver did not correspond to any in this laboratory's unsolved shooting file.
- g) Laboratory ammunition of the same brand and type as Q-3 was test fired in the revolver at 4, 6, 12, 18, 24, 30 and 36 inches from a twill or carbon paper faced target for comparison to the density of the stippling pattern depicted in color photographs (transparencies) of the right side of M. Olinger head.

**OPINION:**

The Q-1 revolver is a functional firearm.

The Q-2 lead fragments cannot be further categorized.

No gunshot residue pattern was detected on the Q-4 parka.

The stippling density depicted in photographs of the right side of Mr. Olinger's head is consistent with a distance greater than 6 inches but less than 30 inches for a shot from the Q-1 revolver with ammunition of the same type as the Q-3 cartridges.

William A. Schrand, Firearms Examiner

WAS:scb

**RESULTS:**

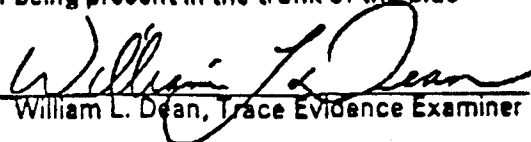

A search for foreign hairs on the victim's clothing, Q-4 and Q-5, was negative.

A microscopic examination of the tape lifts, Q-6, revealed several caucasian head hairs. These hairs corresponded in color, configuration, and microscopic characteristics to hairs from Melvin Olinger, K-1.

A microscopic examination of the tape lifts, Q-7, revealed numerous, short, head hair fragments. These fragments displayed negroid characteristics, but were too short for further examination.

**OPINION:**

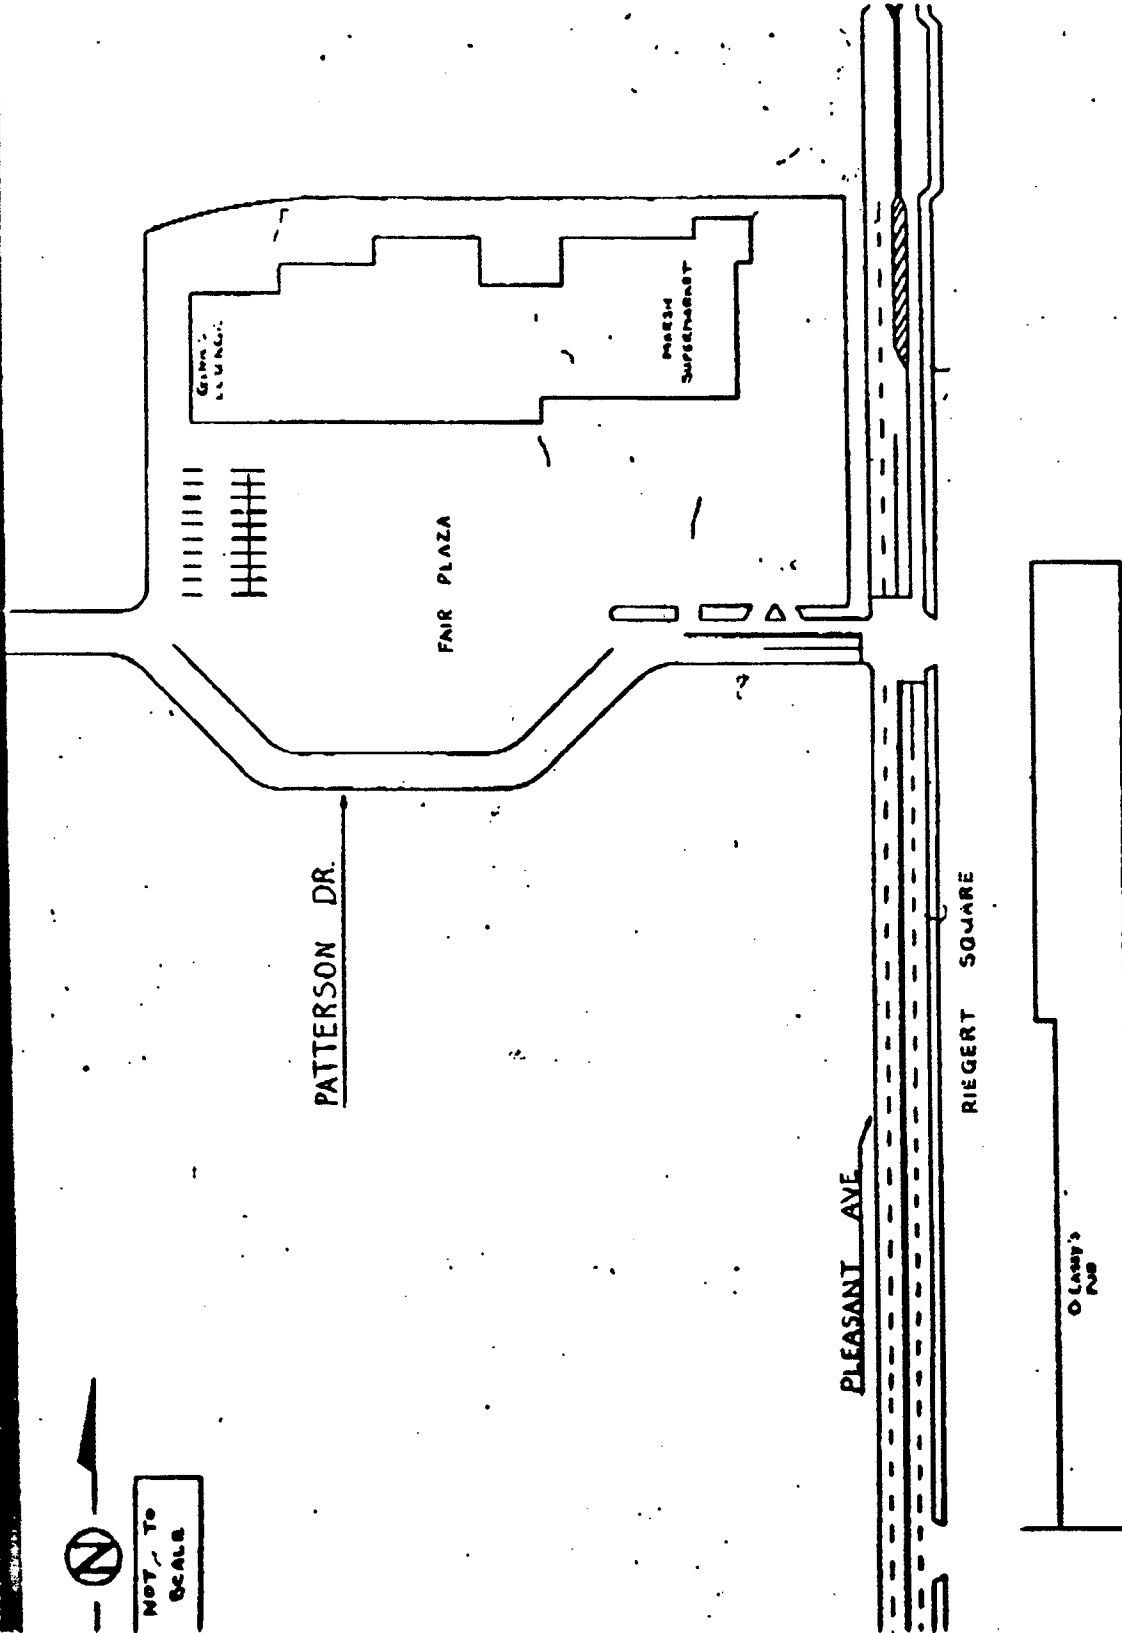

The above results are consistent with head hairs of Melvin Olinger being present in the trunk of the blue FORD "TAURUS".
